

The role of galactic feedback in regulating angular momentum and intrinsic alignments of galaxies

Jolanta Zjupa

In collaboration with: Volker Springel, Ruediger Pakmor,
Rob Grand, Oliver Hahn, Bjoern Malte Schaefer

Shanghai 04.11.2019

Weak gravitational lensing

high redshift z

average galaxy
shape *assumed* to
be spherical

redshift $z = 0$

all correlations *assumed* to
be caused by LSS properties

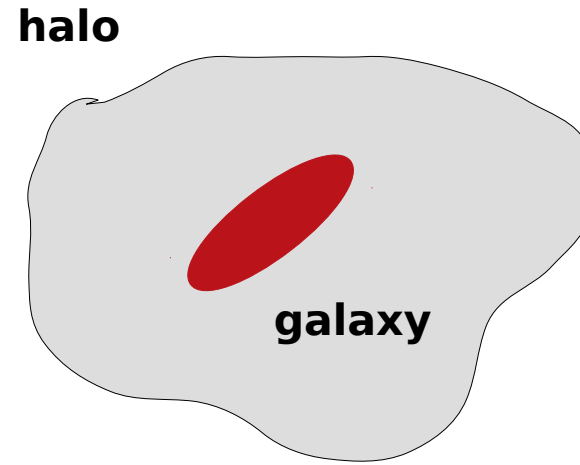

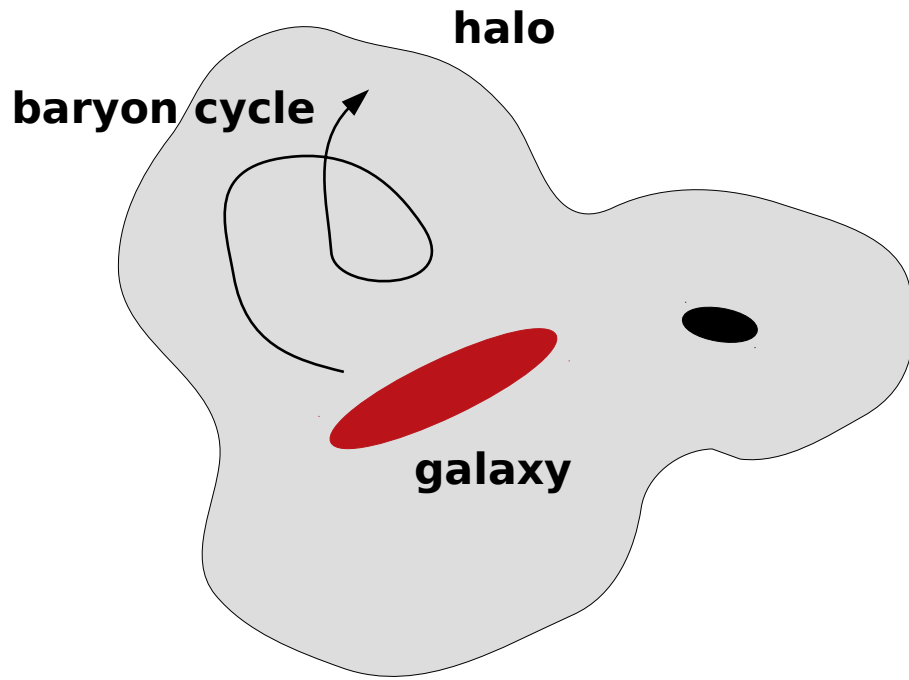

Image: NASA/ESA, Illustris collaboration

Intrinsic alignments of galaxies: spiral galaxies

IllustrisTNG: realistic galaxy population

IllustrisTNG simulation cosmological hydrodynamical

successes: morphological mix,
colours, sizes of galaxies

resolution

$dm \sim 7.5 \cdot 10^6$

baryonic $\sim 1.4 \cdot 10^6$

IllustrisTNG: sample selection

rotational support

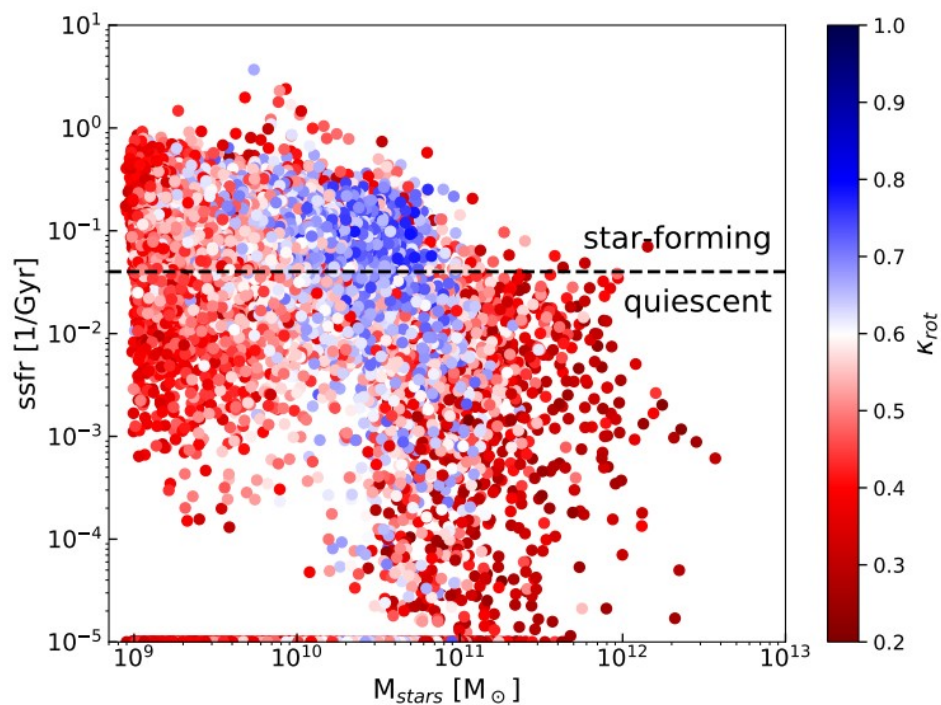

colour selection

$$K_{rot} = E_{rot}/E_{kin} = \sum_i \frac{1}{2} m_i \left(\frac{j_{z,i}}{r_i} \right)^2 / \sum_i \frac{1}{2} m_i v_i^2$$

IllustrisTNG: sample selection

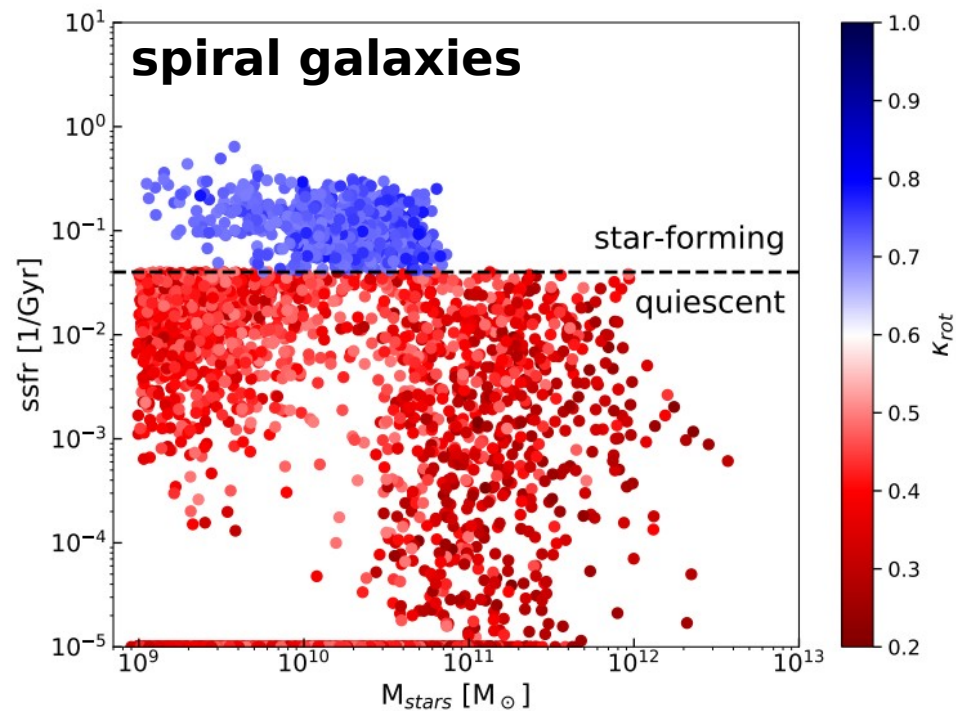

rotational support

$$\text{sSFR} > 0.04 \text{ Gyr}^{-1}$$

$$K_{\text{rot}} > 0.7$$

spiral galaxies

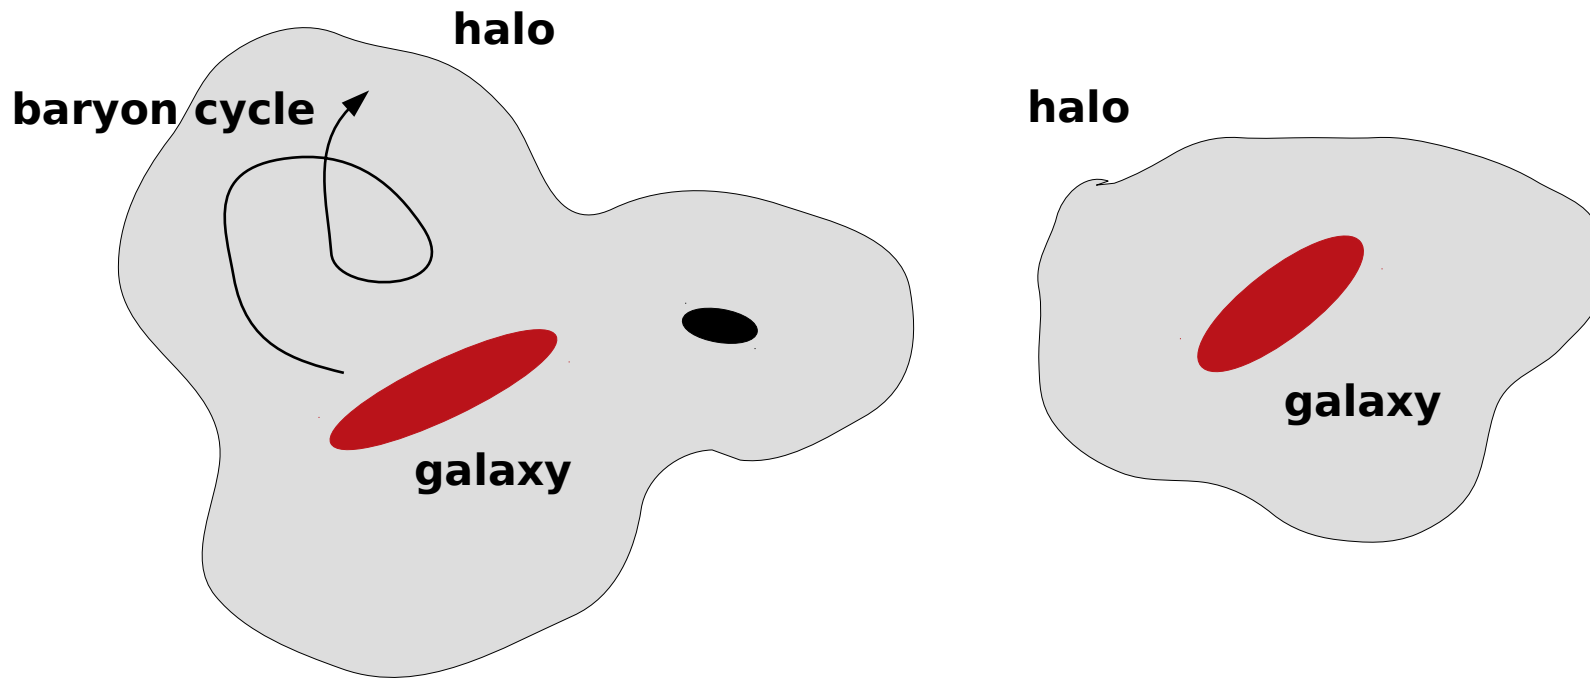

elliptical galaxies

$$\text{sSFR} < 0.04 \text{ Gyr}^{-1}$$

$$K_{\text{rot}} < 0.5$$

Intrinsic alignments of galaxies: spiral galaxies

$$\langle \hat{L}_\alpha \hat{L}_\beta \rangle = \frac{1 + A}{3} \delta_{\alpha\beta} - A \tilde{\Phi}_{\alpha\gamma} \tilde{\Phi}_{\gamma\beta}$$

Lee & Pen 2001

$$\epsilon = \alpha A/2 \sum_i (\tilde{\Phi}_{xi} \tilde{\Phi}_{ix} - \tilde{\Phi}_{yi} \tilde{\Phi}_{iy} - 2i \tilde{\Phi}_{xi} \tilde{\Phi}_{iy})$$

Crittenden et al. 2001

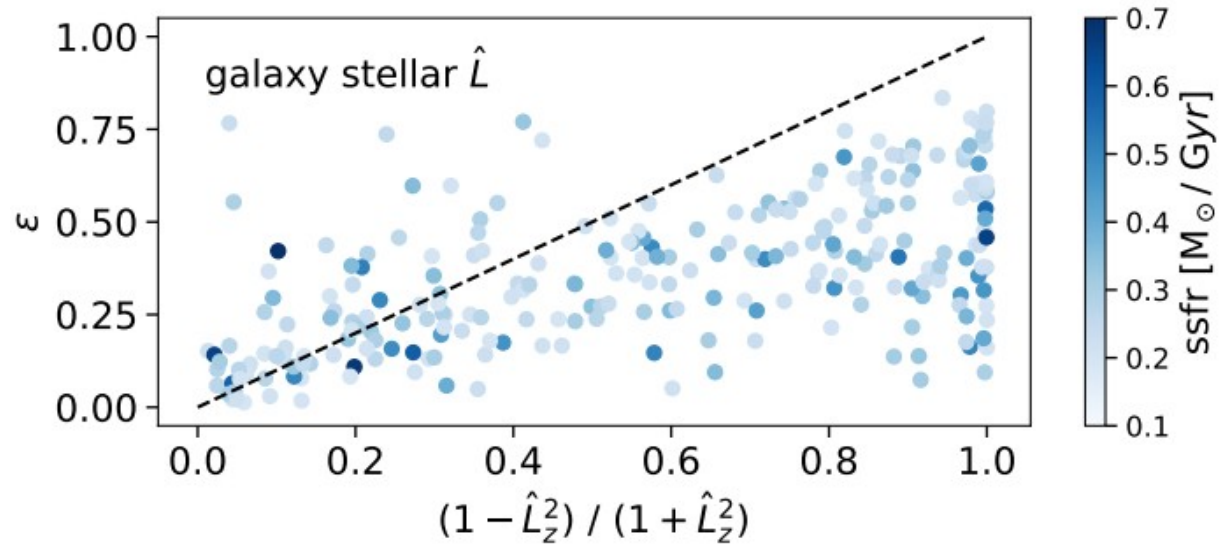

quadratic model

Intrinsic alignments of galaxies: spiral galaxies

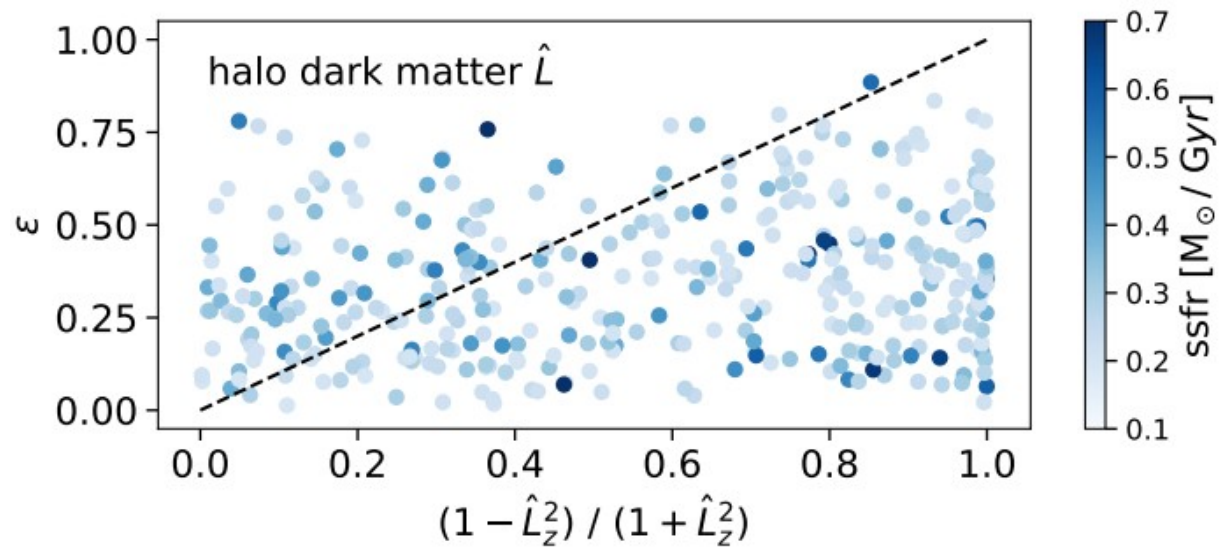

$$\epsilon = \alpha A/2 \sum_i (\tilde{\Phi}_{xi}\tilde{\Phi}_{ix} - \tilde{\Phi}_{yi}\tilde{\Phi}_{iy} - 2i\tilde{\Phi}_{xi}\tilde{\Phi}_{iy})$$

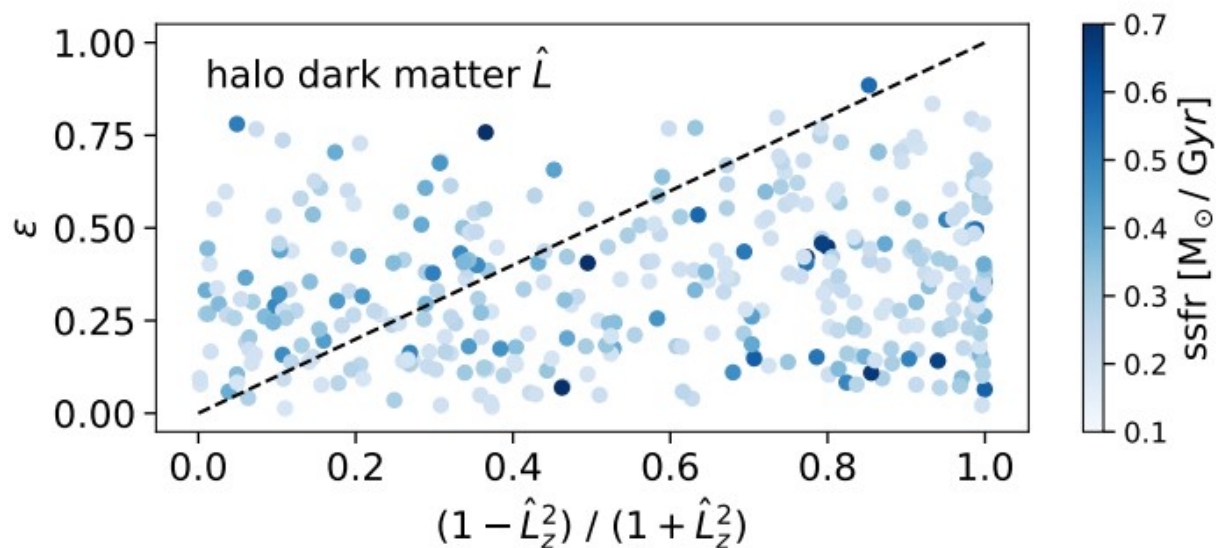

Intrinsic alignments of galaxies: spiral galaxies

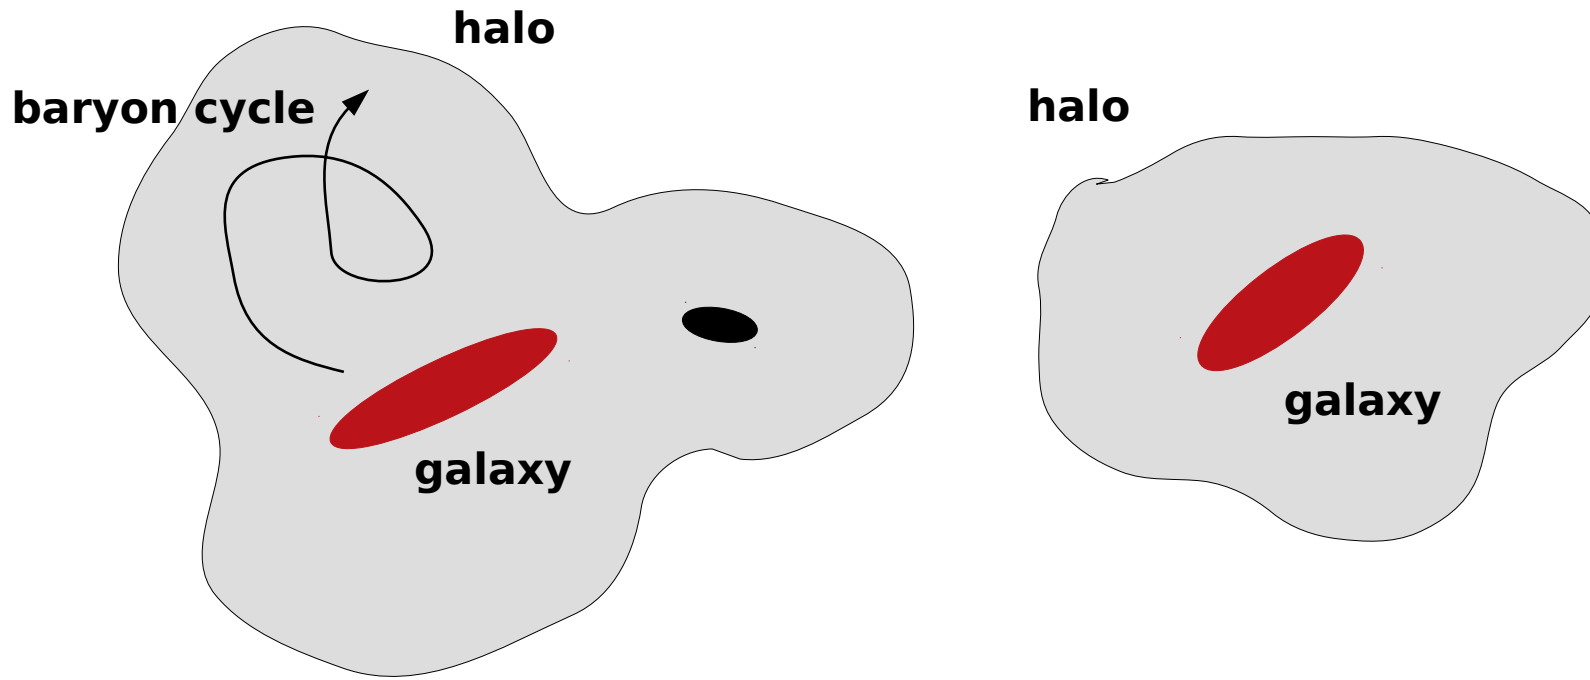

Intrinsic alignments of galaxies: spiral galaxies

Intrinsic alignments of galaxies: spiral galaxies

Intrinsic alignments of galaxies: elliptical galaxies

$$\epsilon = D (\hat{\Phi}_{xx} - \hat{\Phi}_{yy} + 2i\hat{\Phi}_{xy})$$

Hirata & Seljak 2010
Piras et al. 2017

linear model

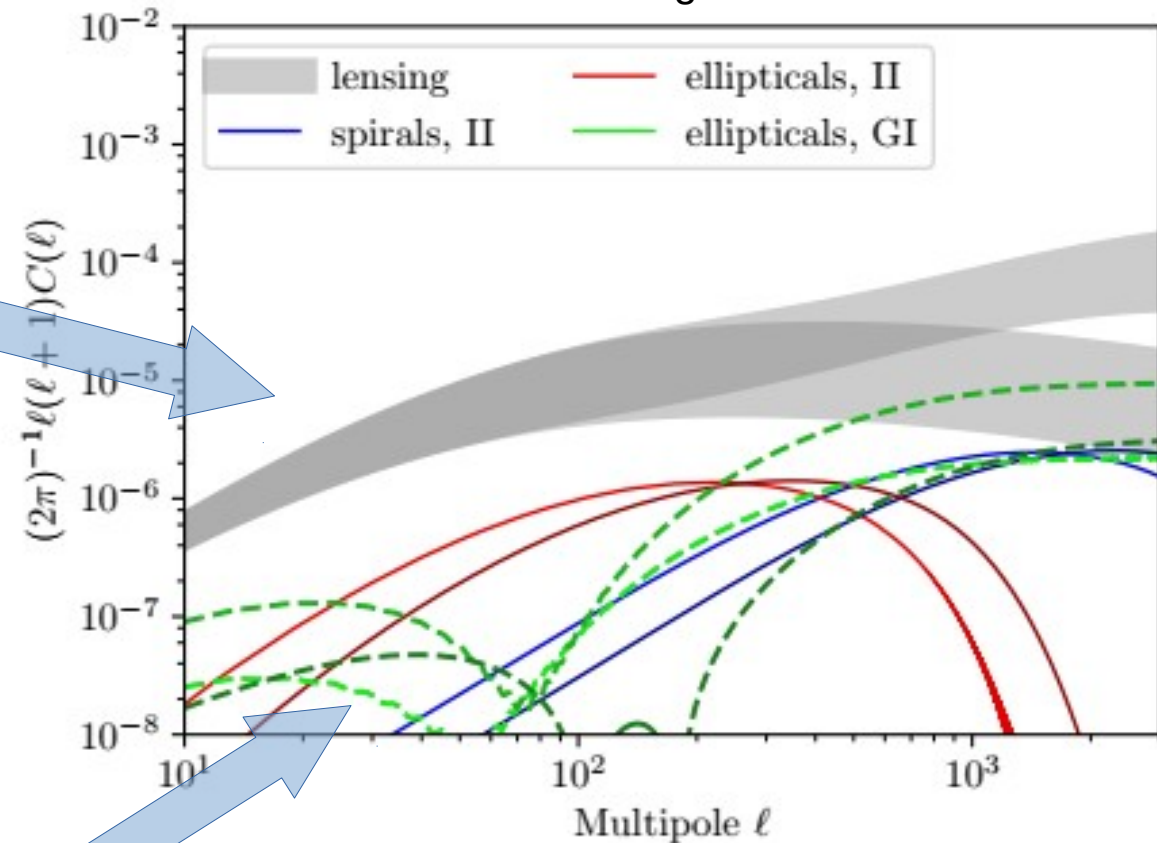

Intrinsic alignments of galaxies: elliptical galaxies

$$\epsilon = D (\hat{\Phi}_{xx} - \hat{\Phi}_{yy} + 2i\hat{\Phi}_{xy})$$

Intrinsic alignments of galaxies: lensing predictions

Tugendhat & Schaefer 2017

derive cosmological parameters

remove bias from intrinsic alignments
